Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Perdue (US 4,848,327).

Claims 1, 4, 7-11, 16, 17, and 19-21: Perdue discloses a method and apparatus where an alignment device aligns a verification or guidance device such as x-ray image device. ~~Perdue~~ further discloses that the device described above includes an elongated spacer element 10 having proximal and distal portions and an insert engaging element disposed on the distal portion and an alignment guide surface affixed to the spacer element and defining an alignment orifice, the alignment orifice being spaced apart from the insert engaging element. In addition, Perdue discloses that the device described above where the aligning of the x-ray device is used to insert prosthesis during orthopedic surgery. Moreover, the alignment guide surface affixed to the spacer element and defining an alignment orifice, the alignment orifice being spaced apart from the prosthesis engaging element and a prosthesis having an engaging element and a visual indicator element, the engaging element configured to releasably engage the prosthesis engaging element of the alignment verification device so that, upon engagement, the alignment orifice is spaced-apart from the visual indicator element (col. 7, line 46 – col. 8, line 51; col. 9, line 14 – col. 11, line 36).

Art Unit: 3737

Claims 2, 3, 5, 6, 12-15 and 6: Perdue's disclosure of alignment device is used in orthopedic procedure. The spinal disc surgery is considered orthopedic procedure therefore, Perdue inherently anticipate the use of the alignment device in spinal disc prosthesis.

Claim 18: Perdue also discloses optical visual marker, although not explicitly stated as laser marker, to create sight line for the insertion element, which may include laser pointer (col. 11, lines 19-36).
